Lesson 5

Decoding the Encoded Part 2

In this lesson we'll continue to discover more constants as well proofing more mathematics encoded at megalithic sites especially at Giza. We'll continue to follow Carl P Munck's Disc 1 as I will not re-invent the wheel for the 3rd time. Project KINDS will continue to show you forgotten or lost secrets in which our ancestors encoded in their sites and structures. Let's head back to Giza to take a look at two known coordinates of the smaller pyramids seen in figure 5.1.

Figure: 5.1 – Carl Munck's illustration of Grid Vector Giza

When we take the grid longitude of pyramids 4,5,6 of 7.396853329 and grid latitude of pyramids 7,8,9 being 41,252.96127 we get yet another constant. This constant of 5577.096018419 becomes the Grid Vector, Grid Value or Giza's Vector of two intersecting longitudes and latitudes.

41,252.96127 / 7.396853329 = 5577.096018419645

A plethora of new constants can be found with these numbers to proof their relationship to one another through this pyramid matrix.

Giza's Vector Constants with respect to 5577.096018419645 as a number;

We can find these constants some already known and some to be discovered.

1st 5577.096018419645 x 3π = 52,562.89164 The Grid Longitude of Stonehenge
2nd 5577.096018419645 x 2π = √VS = The square route of the volume of a sphere
3rd 5577.096018419645 / 2R = 48.66934411 = The Radius of Stonehenge
4th 5577.096018419645 x√15 = 21,600 = The Grid latitude of Stonehenge
5th 5577.096018419645 x6π = 105,125.783 = Tzintzuntzan (Mesoamerican site)
6th 5577.096018419645 / 360 = 15.49193338 = Azimuth of Teotihuacan Mexico
7th 5577.096018419645 x π^3 (Pi cubed) = 55,043.731 = Monk's Mound, Illinois

When we look at the 1st set of numbers we throw in the # 3 when multiplying it to π, why? Remember what I said is that all you have to do is look at the site for clues in the decoding process. We can get the number 3 from multiple ways at Giza – 3 large pyramids, 3 small pyramids, 3 sets of alignments of the pyramids… that all totals up to 3 as well - 3 different arrangements all together.

When we look at the 2nd set of numbers where we multiple 2 to π, the same logic applies to why we used the # 2. We have 2 sets of smaller pyramids. We have one pyramid when looked upon as a 2 dimensional shape we get a triangle. When divided in half we get two triangles that both equal the golden ratio (which I will get too later, I promise). We could also say that the two largest pyramid's apex's align with one another on a 45* angle when looking down upon them from above being the Cygnus constellation.

When looking at the 3rd set of numbers we divided 2 to the Radian. Why not? We would not have found Giza's relationship to this matrix without using it prior to this. It is also very note worthy it equals Stonehenge's Radius.

When looking at the 4th set of numbers we tried a similar approach to the 3rd set of numbers as we incorporated the √15 and again to find an exact comparison to Stonehenge's Grid Latitude.

When looking at the 5th set of numbers we looked at the 6 smaller pyramids and they too point to a GV of the worlds' longest pyramid Tzintzuntzan (Mesoamerican site).
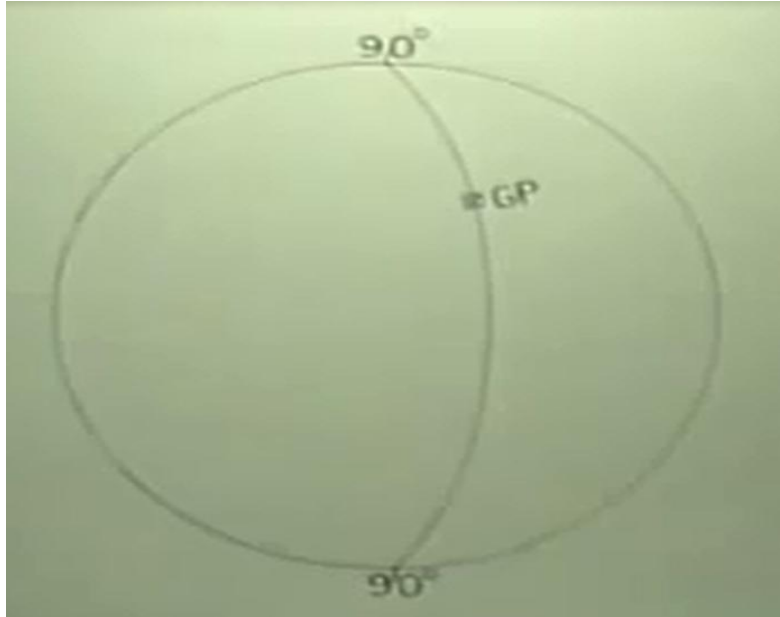

When looking at the 6th set of numbers we divided 360. Why? 360 is the Prime Meridian of the Great Giza Pyramid. We also had to gain the basic understanding of the circle before getting here too. A full arc of a circle is 360*. We find the azimuth of another great pyramid or several at Teotihuacan Mexico.

When looking at the 7th set of numbers we raise Pi to the cube and again I'll illustrate like at Stonehenge the connection of the cube at Giza. We find another pyramid or pyramid mound at Illinois North America. Its grid latitude crosses the dead center base of the pyramid structure. Did you know Illinois has pyramids or mounds that look like pyramids? They're several in the area while little to no excavation has been made (March 7th 2015).

We've found indeed more proofing of their system or unless this is all one big coincidence. A coincidence so large that it's starting to become laughable isn't it? Is someone still adding up the odds of all this? It has to be in the area of 100,000,000 to 1 right? Anyone want to even try betting in favor of this being one megalithic coincidence? If you still feel for whatever reasons this is all a

misunderstanding, one big coincidence or even mathematical trickery… have a good hard look at the next section of this lesson starting with figure 5.2.

Figure 5.2 – Carl Munck's illustration of Earth's Prime Meridian across the Great Giza Pyramid

Here we see our ancient ancestors Prime Meridian north to south. 90* north or 90* south is seen at the polar north and polar south of Earth. Carl notes that the Great Giza Pyramid has a unique attribute that is of its own. What is it? Something I missed for sure when looking for clues at Giza and running the numbers through the mill.

Take 90* / R / AP
90* / 57.29577951 / 1.177245771 = 1.3342977019 (radian system to metrological system)
If we take this new number and give it back to 360 we get 480.3471728 ft.
1.3342977019 x 360 = 480.3471728
GPH (Great Pyramid's Height) = 480.3471728

In all my research I've seen the Great Giza Pyramids' height measured anywhere from 450ft to 500ft with some experts measuring around 480ft but not once I have come across such a number showing so many decimal places. Why is it important to know the Great Giza Pyramids height? For many reasons which I will share later on but this is not the only way to get this number through the pyramid matrix. We'll find out how later on and realize what its height will continue to show us and prove.

To find the circumference of the GGP;
480.3471728 x 2π = 3018.110298 ft
GPC (Great Pyramid's Circumference) = 3018.110298

To find the height of the GGP again;
R / 360 = 0.159154
0.159154 x GPC = GPH

With these measurements we can now identify its original specifications just like at Stonehenge.

Great Giza Pyramid's Original Specs:

Volume   91,155,780.93 cu.ft
Area   569,311.8608 sq.ft
Circumference   3.018.110298 ft
Length   754.5275745 ft
C/H Ratio   6.283185307
Slope   51.85397361*degrees
Height   480.3471728 ft

Carl states this is the first time in 10,000 or 12,000 years that anyone has found the original specifications of the Great Giza Pyramid. I've searched since this knowledge on more than enough websites, books, blogs etc… and no one but Carl P Munck has found this. I must have tried several times proofing this man's math and discoveries in respect just to these numbers and could not because and again no one has them. No one knew to think about the global application as Carl found out and again, some other people's numbers of Giza are close, but not this accurate I'll tell you that.

If we stop and think about these numbers for a moment… what other possibilities lay within the decoding process? We're not uncovering formulas that only one or two people can figure out right? No formulas that run so long that it would take several days to figure out. No made up symbols to represent formulas in which a hand full of people can figure out let alone know about. The numbers used to proof all of this are basic aren't they? Almost laughable that it's this easy. I'd imagine Carl wasn't laughing for those years and years of research. He mentioned over 30,000 mathematical numbers and probes before discovering and teaching us this when looking through this pyramid matrix. I won't show you all these numbers yet but I will say it's been an absolute pleasure in following Carl's math and discoveries. It's too bad he didn't have the internet as it is now to find even more answers and discoveries as I will show you later on.

People ask me and each other why did they build the pyramids so damn big and why did they spend thousands of years chiseling out rock and using slaves to do so? Why and how did they export over the pink granite rock that was over 500 miles away? How did they cute the facing angular stones to be only 1/16 of an inch in gap of one another where you cannot even get a razor blade in between? Why, why, why… how, how, how… the questions many today are trying to answer but all in my eyes fail because they don't realize the global application that all megalithic sites have in common. That common ground is the date and time they were built to one another. They had to be right? It makes logical sense that the builders had to build them in the same time frame – but as history tells us, Christopher Columbus discovered America. Yet what did he discover? Indians, Indians that continue to tell us today that certain ancient sites in America where there long before they got there. How old are these places? Pretty much everyone assumes these places have to have been built post flood (which I'll get into the math as well) or post ice age (which I'll get into the math as well too), after all, that's what we're lead to believe. Could the build date of these structures and earthworks be encoded? All we have to do is ask.

Vol / 2π^3 / H / L = 1.013944669 X 360 = 365.020081
91,155,780.93 / 248.050213   / 480.3471728 / 754.5275745 = 1.013944669 x360 = 365.020081
2π^3 = 248.050213 (explained later on)

Is this number the length of the year when the builders decided to A) begin construction or B) Finish construction?

Here is some facts about our time here on Earth in the modern today's world. We know that the year Carl made his video in 1994, the length of the year was 365.2442. In year 500 AD the length of the year was 365.2440. For every 1496 years the 4th placed decimal number (ten thousandths) changes by 2. This information is so powerful and simple to show you that my fingers and hands shake with fear and excitement. If you want to try this out for yourself please feel free to do so without reading further on. Remember that the ancient known Egyptian pharaohs stated that the pyramids where already there before they got there. That is a fact not a question – I'll gladly show you this too later on.

Calculating the pre or post build date of the Great Giza Pyramid and everything else in this Matrix is done like so;

1994, the length of the year was 365.2442
500 AD, the length of the year was 365.2440
Through the decoding process, we found that the length of the year when the Giza Pyramid was either started or finished was 365.020081.

1994 = 365.2442, 500 = 365.2440 = for every 0002 (ten thousandths of a decimal point) = 1496 years

Looking just at the numbers after the decimal point;
2442 – 2440 = 1496 years for every 0002 digit in the total length of year.
2440 – 2340 = 74,800 (2440, 2438, 2436, 2434)
2340 – 2240 = 74,800 years
2240 – 2140 = 74,800 years…
2140 – 2040 = 74,800
2040 – 1940 = 74,800
1940 – 1840 = 74,800
1840 – 1740 = 74,800
1740 – 1640 =74,800
1640 – 1540 =74,800
1540 – 1440 = 74,800
1440 – 1340 = 74,800
1340 – 1240 = 74,800
1240 – 1140 =74,800
1140 – 1040 =74,800
1040 – 0940 =74,800
0940 – 0840 = 74,800
0840 – 0740 =74,800
0740 – 0640 =74,800
0640 – 0540 =74,800
0540 – 0440 =74,800
0440 – 0340 =74,800
0340 – 0240 =74,800
0240 – 0200 = 29920

74,800 x 22 = 1,645,600 + 29920 = 1675520 + 1496 = 1677016 + the difference from 1994 to 2015 = 21 years…

The pre or post build date of the Great Giza Pyramid for the first time as Carl did not mention it, but supported the math behind it is;

The Great Giza Pyramid is 1,677,037 years old (2015) add +1 for every year after 2015 if you're late reading this. We could argue a few more years in difference, but it still puts the build date a lot more then 12,000, 8000, 5000 etc… years told us by best guessers doesn't it? Remember that through the pyramid matrix system on whole numbers via the coordinates of all these places would be off from one another if there were not built in the same time frame. That time frame is only 37,400 years of difference.

Did you get the same result or close to? Is this why so many so-called experts fail to prove anything real about the pyramids and all other megalithic structures on our planet? Is this why we believe someone else's ideals about them like being tombs even though no hieroglyphs were ever found in them let alone bones, artifacts, treasures etc… They were never built for such things. They were built for all to see and learn from. The only facts found in the Great Giza Pyramid because someone broke into it was water line markings, electrical arching burnt marks and newly discovered emitting frequencies – still to this day.

What really is the Great Giza Pyramid? Remember what I said to you earlier about the claims of Nikola Tesla's Wardenclyffe Tower being made in the image and frequency range of that of the Great Giza Pyramid? Nikola Tesla didn't have the money nor the product and time to recreate a Pyramid in Colorado or New York State. He did build one out of timber and other elements which reflect similar to such places like HAARP facilities in Alaska (where they studied the ionosphere(s) for about 15 years) and soon and I mean hopefully soon again by the company Global Energy Transmissions or other similar companies. Did you know that Nikola Tesla's tower was 100% functional? Did you know that was over 110 years ago? I guess the timing was right huh? Is the timing right now? There is an energy issue with the world isn't there? There has been numerous companies, people and students especially recently that have concluded that the stones at Giza's oldest pyramids are a poured mixture of concrete with PSI measurements over 70 and higher depending on the stones but on average around 73 PSI. That's 13 PSI better (at least from what I can learn from the web) then any leading concrete manufacturer in the world – I will provide evidence and proof of this too. If you're wondering what happened to our ancestors, I'll answer this too later once we're all through the math which Carl doesn't claim to know or depict as far as I know.

If you've read and followed the lessons and information up to this point, you'll know better than to believe those accusations. We're talking structures and sites on a global array that communicates to another through math! There is only one way they could have precisely done this! Ever heard of the Black Knight Satellite? Countries claim that the orbiting hunk of unknown energy signatures and mass is estimated to be over 13,000 years old – just run a search on it if you don't believe me – and again, if you're with Carl and I so far you'll understand that these sites had to have been made with precise instrumentation, a global tool from above – unless proven otherwise I beg you try especially what's in store in lesson 7.

Before I get into so much more, let's speak some math language for a moment.

At Stonehenge	**At the Great Pyramid**

SR / SC = 0.159154943   H / C = 0.159154943
X360 = R   X360 = R

Also,
30π x $\sqrt{15}$ = 365.020081
365.020081 / π^3 = 11.77245771

Both sites use the same coding (encoded and now decoded).

It is important we learn the flip flop methodology; we can use:
2π^2 / 2π^3 = 0.159154943 the reciprocal of double Pi – but not recognized in today's math books.
0.159154943 / 2π = 2π^2
Now we know why the 2π^3 was encoded to figure out the length of the year.

Taking these numbers to the western hemisphere;
0.159154943 x R = 9.118906529
The number 0.159154943 is less than 0, an inverted quantity as Carl states seen in figure 5.3

Figure 5.3 – Carl's Illustration of Teotihuacan Mexico (later explained in full details)

What about this new constant and how to get it at Stonehenge?

0.159154943 x SR = √60, now we know we they encoded the square roots.

Lesson 5 Conclusion:

The reality of these megalithic structures and sites is not about a secret form of encoded cryptic sorcery that only a warlock from the 9th dimension can unlock. They are simplistic designs for all to see and gain intelligence from. I call the Great Giza Pyramid the master while I'm its student. You just to have to speak the language - communications taught through math. I know it's hard to believe this, trust when I say "I agree with you!" I should have taken the blue pill. I can't help think of a better analogy than the movie "The Matrix" where Morpheus offers Neo the choice of the blue pill or red pill to see how far the rabbit hole goes. https://www.youtube.com/watch?v=zE7PKRjrid4 Clip from the movie the Matrix. By the way, has anyone calculated the odds to disprove any or all of this?

As a metaphor and to think seriously for a moment;

The next lesson is going to propel you into a new level of this pyramid matrix system now that you, like Neo will have to face a choice now. If you want to see how far this matrix goes take the red pill and read on. If you don't want to know who and where we're from stop reading. We already know we're at least 1.6 million years old. The how is more or less answered (which I will try and prove more so later on) along with what and why. I promised you I'd answer the "why, when, where, who and how". Before I wrote this tutorial of knowledge and speaking of the contents in the next lesson a lot of people stayed away from believing Carl's discoveries because and again we're just so used to thinking and believing we've only been here on Earth for such a time. I warn you now this is no joke because the math and this system does not lie. Think about your choice wisely, grab your favorite beverage and snack and think on it.

I may be paraphrasing here, a very wise man once said "All you have to do is open your mind up to science" - Stephen Hawking
